SKILLS

Languages & Frameworks

Python JavaScript TypeScript HTML CSS

SCSS Java Kotlin PHP Django Flask

FastAPI Celery Ruby on Rails React

Angular Bootstrap Drupal

AI & Generative AI

LLM Integration Prompt Engineering

OpenAI API Anthropic Claude API LangChain

RAG Pipelines AI-assisted Development

Data & Infrastructure

PostgreSQL MySQL MSSQL Solr Redis

BigQuery Docker Kubernetes Terraform

Jenkins GitHub Actions Nginx Linux

Android Pytest Cypress AWS GCP Azure

MongoDB

INTERPERSONAL SKILLS

Led and mentored a team of **10+ developers and QA engineers**, delivering complex projects with high quality and adherence to best practices.

Partnered with stakeholders to elicit requirements and translate them into clear technical specifications, delivering user-focused solutions on schedule.

EDUCATION

Bachelor of Engineering

JSPM's Rajarshi Shahu College of Engineering, Tathawade, Pune

2015 - 2019 · SGPA: 7.26

HSC (12th Grade)

Bharat English School and Junior College, Shivajinagar, Pune

2015 · 72.2%

AISSC (10th Grade)

Bharati Vidyapeeth's English Medium School, Balewadi, Pune

2013 · 84.4%

Sanket Pande

Software Engineer

7+ Years of Experience

Profile

Software Engineer with 7+ years building reliable, user-focused applications across Python/Django, FastAPI, and React/Angular, with depth in cloud infrastructure and security hardening. I automate deployments with Docker, Terraform, and CI pipelines, work hands-on with LLM-based and generative AI tooling to speed up delivery and build smarter product features, and enjoy simplifying complex problems, mentoring teams, and shipping measurable impact.

Employment History & Projects

Software Engineer

Taliun Solutions / Health Compiler | July 2023 - Present

- **Improved** query and processing performance by 60% for systems storing millions of patient records through targeted indexing, query optimization, and batch-processing improvements.
- Built and maintained lab/EHR integrations (**Elation, Hint Clinical**, and others) supporting patient and employer onboarding workflows.
- Worked with a top healthcare company (US/Canada) to migrate the UI from **Django templates to React**, improving performance and user experience.
- Built and maintained responsive, production-grade web applications using **React.js, TypeScript**, and modern component-based architecture. Developed dynamic forms with **JSONForms** and **AJV** validation, integrated REST APIs, implemented complex business logic, optimized application performance, and collaborated closely with backend services to deliver scalable healthcare analytics and onboarding solutions.
- **Built and shipped** LLM/generative AI tooling (including the **Anthropic Claude** and **OpenAI APIs**) into internal workflows to accelerate development and deliver AI-assisted features.
- **Hardened** cloud security posture by remediating compliance-scanner findings—tightening over-privileged **IAM** roles and service accounts, enabling bucket versioning and deletion protection, enforcing Public Access Prevention, and rolling out org-wide 2FA—and authored remediation reports for stakeholders.
- **Managed** and scaled Compute Engine workloads via Managed Instance Groups, autoscaling policies, and instance templates; added **Identity-Aware Proxy** tunnel access for secure infrastructure access without public IPs.
- Operated Cloud SQL networking, backups, and restores, and built analytics pipelines on **BigQuery** for healthcare dashboards covering care gaps and Health Risk Assessments.
- Introduced **design patterns** to improve **code quality** and **maintainability** across the codebase.

Fullstack Developer

Axonator | April 2021 - May 2023

- Worked on **Axonator** - A No Code Form Builder and Data Collection App, with a **tech stack** of backend technologies such as **python and django, solr** search engine, **AWS Cloud**, and SRE tools like **Docker and Jenkins**.
- **Containerized** the complete infrastructure of Axonator for on-premise setup for both Windows and Linux environments, decreasing initial infrastructure setup time by 90%.
- **Optimized** the process of generating Excel workbooks for thousands of records containing JSON data, reducing the time by 50%.
- **Optimized** the process of sending app structure and forms from server to mobile devices, reducing the time by 70%.
- **Automated** all operational tasks by implementing a CI/CD pipeline for Web and Mobile applications with analysis reporting, reducing build issues by 40%.
- Created form builder and workflow builder using **AngularJS/Angular 13** while working on Axonator.

Fullstack Developer

Sankey Solutions | July 2019 - March 2021

- **Migrated** a luck-based game project's codebase and UI build to new infrastructure; built backend services for the same project using **Ruby on Rails**, integrated multiple services into a **GitLab CI/CD** pipeline for automated builds and deployments, and configured an **nginx reverse proxy** to route services — improving deployment speed and overall reliability.
- Built a customer web portal for one of India's top automobile manufacturers to track vehicles and manage business, using a **Django** backend with **Docker and Kubernetes** in a microservices architecture, with CI/CD via GitHub and Jenkins.
- Created the UI (frontend in **React**, backend in **Express**) for an **AI-driven** media project that generated movies from text prompts; implemented **real-time** rendering and a **timeline editor** to preview and edit scenes before export.
- **Managed cloud infrastructure** (AWS) and led technical support for one of India's top 10 news organizations, building frontend features with **Drupal, HTML, CSS, and JavaScript** and integrating **Google Analytics** and Google Ad Manager.
- **Led development** of an Android app for farmers to connect with agricultural experts, built on a **Drupal** backend with Google APIs for authentication, live video, and live chat.
- Built a **SaaS** product to convert Word documents to HTML and vice versa using **Angular 8**, and later implemented a graphical analytics dashboard in **Angular 13** using **ApexCharts** for dynamic chart rendering.
